LOKENDER PRATAP

New Delhi, India | +91 9310105951 | lokenderpratap8@gmail.com | GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Final-year B.Tech Information Technology student with hands-on experience in Data Analytics, Machine Learning, Python, SQL, and Power BI. Skilled in building data-driven solutions, ML pipelines, and interactive dashboards to derive actionable business insights. Seeking internship opportunities in Machine Learning, AI Engineering, and Data Analytics.

EDUCATION

Dr. A.P.J. Abdul Kalam Technical University — Greater Noida, Uttar Pradesh
Bachelor of Technology in Information Technology — Expected June 2027
CGPA: 6.62 / 10
Relevant Coursework: Data Analytics, Database Management Systems (DBMS), Data Structures & Algorithms, Object-Oriented Programming, Machine Learning

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, HTML, CSS
ML / Data Libraries: Pandas, NumPy, Matplotlib, Scikit-learn
Tools & Platforms: Power BI, Tableau, MySQL, Excel, MS Office, GitHub, Jupyter Notebook, VS Code, Cursor
Concepts: Machine Learning, Exploratory Data Analysis (EDA), Feature Engineering, Random Forest, TOPSIS Algorithm

PROJECTS

Credit Risk Analysis (GitHub)

- Developed an end-to-end credit risk analysis system using **Python, Scikit-learn, and Power BI** to predict loan default risk and analyze customer financial behavior.
- Performed comprehensive data cleaning, exploratory data analysis (EDA), and feature engineering to identify key risk factors impacting loan repayment.
- Built and validated multiple ML classification models to accurately flag high-risk loan applicants.
- Designed interactive **Power BI dashboards** visualizing loan trends, income patterns, and risk segments, enabling data-driven business decisions.

Phishing Detection System | PhishGuardAI (Vercel)

- Engineered a cross-language, real-time phishing detection platform integrating a **Java Spring Boot** orchestrator with a **Python FastAPI** machine learning microservice.
- Implemented a **Random Forest classifier** for URL feature extraction and classification, achieving high prediction accuracy on phishing vs. legitimate URL datasets.
- Collaborated in a team of 3 to design RESTful API contracts between services, ensuring low-latency, production-ready inference pipelines.

Hospital Decision Support System — TOPSIS Algorithm (Vercel)

- Built a full-stack **MERN-stack** hospital comparison platform leveraging the **TOPSIS multi-criteria decision-making algorithm** for objective, data-driven hospital ranking.
- Developed an interactive Glassmorphism dashboard with **Radar Chart visualizations** to help users navigate complex healthcare trade-offs across multiple performance criteria.
- Integrated a Python-based ML backend to preprocess hospital metrics and feed ranked results to the frontend in real time.

ACHIEVEMENTS

- **2nd Place, IIMT Hackathon** — Delivered a high-performance algorithmic solution using **C** for core logic and **HTML** for the interface, outperforming 20+ competing teams. (View)

CERTIFICATIONS

- **Data Analytics** | Cisco
- **Power BI for Beginners** | SimpliLearn
